

I am a professional truck driver and XM Satellite Radio helps me when I am on the road. Instead of searching for a local radio station for an amount of time; all I have to do is turn to the channel I need and receive the information I need. Along with giving me traffic to keep myself and other drivers safe it also gives me the local weather. By receiving the local weather I know when bad weather is going to occur instead of sitting through commercials I can listen in immediately. As you can see XM gives me and other drivers many benefits not just music. Information drivers need to keep everyone safe and the help every driver can use. From compact cars to a semi XM helps everyone so please try and keep it going! Thank you!
